# **Panasonic**

Airflow System

The cross-shelf directed air flow system promotes optimum

contributes to quick temperature recovery after door openings.

Perforated sidewall panels right (pressure) and left (negative pressure) assure a positive, gentle airflow from right to left.

Optional SafeCell UV decon-

decontamination of the humidity reservoir.

temperature uniformity throughout the chamber and

# CytoGrow ReachIn Series

Large Capacity CO<sub>2</sub> Incubators

#### Space Saving Design

Large capacity and flexibility to grow with your culturing needs, while providing a precise and repeatable interior environment.

#### **Consistent Environment**

Dual Detector IR2 Sensor for quick CO<sub>2</sub> recovery

#### **Optimum Anti-Contamination Measures**

- Copper enriched stainless steel inCu-saFe® technology for germicidal protection.
- Optional UV decontamination system for humidity reservoir.
- Extra heaters positioned around the outer glass door to eliminate condensation

30.1 cu.ft.

# Control & Monitoring

The incubator functions are managed by a fully integrated microprocessor controller with a range of setpoint, alarm, and programmable inputs that are established through the use of function key.

Horizontal airflow maintains accurate temperature and CO<sub>2</sub> control and uniformity at all shelf levels, top-to-bottom, front-to-back.

Discovery powered by precision™

### **CytoGrow ReachIn Series:**

Large Capacity CO<sub>2</sub> Incubators

The MCO-80IC-PA is ideal for culturing large volumes of biological samples, performing microbiological studies, and working with large volume cell culture apparatus.

#### InCu-saFe® Interior

InCu-saFe® forms an integral germicidal barrier against airborne contaminants and helps eliminate mold, spores, and other contaminating spills, while providing a noncorrosive environment.

#### CO, Recovery

IR2  $\mathrm{CO}_2$  sensor with P.I.D. microprocessor control and forced air circulation system delivers fast  $\mathrm{CO}_2$  recovery characteristics. Exceptionally low  $\mathrm{CO}_2$  gas consumption rates, less than half of similar competitive units. P.I.D. temperature control with deviation of  $\pm 0.1^{\circ}\mathrm{C}$ .

# Patented SafeCell UV Protection (optional)

Located safely below the interior base, SafeCell UV destroys airborne contaminants as they pass over the humidity reservoir surface. Pathogens introduced during door openings are ultimately removed.

#### Usability

30.1 cu.ft. large capacity cabinet allows flexibility in usage. Cabinet will also accommodate a roller bottle apparatus, 5 bottles wide x 7 bottles high (requires mounting ramp kit).

#### **Humidity Control**

Humidity reservoir heaters are located outside the walls of the reservoir. They are not as susceptible to corrosion and scaling from water as competitive systems are. The unit can be set to both nominal (above 80% RH) and high humidity setpoints (above 90% RH).

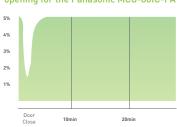

#### CO, Recovery

IR CO<sub>2</sub> sensors offer exceptional control and faster CO<sub>2</sub> recovery, giving the CytoGROW ReachIn incubator a substantial competitive edge as seen in the adjacent diagrams.

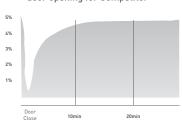

## CO<sub>2</sub> Recovery after 60 second door opening for the Panasonic MCO-80IC-PA

Double Paned Glass Door with out door latch

40 mm(1.57"), 2 locations (right and left sides) with silicone rubber stopper)

## CO<sub>2</sub> Recovery after 60 second door opening for Competitor
